

## Fintech Software Platform and Protocol

HyperQuant is a multifunctional platform for automated crypto trading, asset management and dApps creation that is based on the Fast Order Delivery protocol and blockchain technologies. It is made by professional quant traders who know capital management industry inside-out.

### Implementation of Fast Order Delivery Protocol

## Cutting-edge technology

### Hyper Fast

Fast Order Delivery protocol allows light-speed data transactions between different trading platforms. It works hundreds of times faster than similar solutions, which provides a significant competitive advantage for dApps and the services based on it.

### Hyper Smart

All the components of the platform are managed by HyperQuant Artificial Intelligence and Risk Management system. It constantly evolves through machine learning based on the data accumulated within the protocol.

### Hyper Secure

We use Merkle tree model and proof-of-existence principle to store data of the protocol transactions on Ethereum blockchain. This ensures system transparency and security. The system itself is highly efficient in terms of traffic and computing, so even if it has 1,000,000,000 orders on a daily basis, the proofs will take only 1kb in size and require just 30 hashing operations.

## The Economy of HQ Token

### Hold Tokens

- To use crypto trading bots
- To use market making and hedging software

### Earn tokens

- By developing and placing dApps on the marketplace
- By providing valuable data to the marketplace

### Spend tokens

- To create smart contract that store data about your investment portfolio and your personal configuration of trading bots
- To build your own trading dApps or hedge fund software on top of the platform

## B2B Use Cases

### Market Making

The service allowing to increase token liquidity.

### Hedge-fund Software

The software allowing to start your own crypto-currency hedge-fund in a matter of minutes.

## B2C Use Cases

### Trading Bots App

The application for trading bots management.

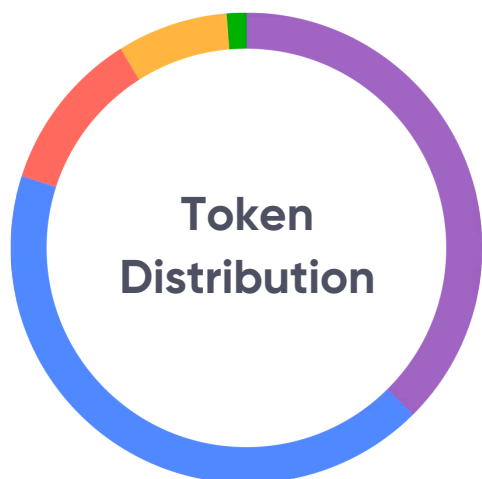

### Trading Bot Marketplace

Users can develop automated trading strategies and put them on the marketplace.
